

Attendance aur points theek karne ki guide

Kisi ek din ka check-in / check-out badalna hai aur uske points bhi apne aap sahi ho jaayein — ye uska poora tareeka hai. Koi programming nahi aati, tab bhi ye guide dekh kar kaam ho jaayega.

Sabse pehle ye samajh lo

Ye script seedha asli (live) database par chalti hai — jo badla, wo turant sab ko dikhega.

Isliye har hukm do baar chalana hai: pehle bina `--apply` ke (sirf dikhata hai), aur theek lage tab `--apply` ke saath.

Kya-kya chahiye

- Wahi laptop jisme project ka folder hai: `D:\React Projects\office-management-software`
- Node.js installed (jo pehle se hai — isi se backend chalta hai)
- backend folder me `.env` file (isi me database ka pata hai — ise kabhi kisi ko mat bhejna)

1 Terminal kholo

Windows me: Start dabao → cmd likho → Command Prompt kholo. Phir ye do line chipkao (ek-ek karke, har ek ke baad Enter):

```
d:
cd "D:\React Projects\office-management-software\backend"
```

Ab tum sahi jagah par ho. Aage ke saare hukm yahin se challenge.

2 Pehle sirf dekho (kuch nahi badlega)

Maan lo Faiz ka 18 September ka check-in 10:09 karna hai:

```
node scripts/fix-checkin.js --user faiz --date 2026-09-18 --in 10:09
```

Ye hukm kuch badalta nahi — sirf batata hai ki kya hoga. Jawab kuch aisa aayega:

```
Database: office_management (DRY RUN — kuch nahi badlega)

Mohd Faiz • mohdfaiz.1842@gmail.com • shift 10:00-18:00, grace 16 min
2026-09-18 abhi: LATE      in 10:49 out 18:33 overtime 0m
2026-09-18 naya: PRESENT  in 10:09 out 18:33 overtime 0m

Mohd Faiz • 2026-09 ke points abhi: 307
2026-09-18 -1 auto_late Late arrival • 2026-09-18
...
(DRY RUN — asli badlav ke liye wahi hukm --apply ke saath chalao)
```

Is jawab ko dhyan se padho:

Line	Iska matlab
Database: office_management	Asli database hai. Agar yahan office_ui_demo likha ho to wo test wala hai.
(DRY RUN)	Abhi kuch nahi badla. Ye shabd dikhe to nishchint raho.
shift 10:00-18:00, grace 16 min	Us bande ka apna shift. On-time ki aakhri hadd = 10:16. Iske baad late.
abhi: LATE in 10:49	Jo abhi database me hai.
naya: PRESENT in 10:09	Badalne ke baad kya hoga. Yahi check karo ki sahi hai.
points abhi: 307	Us mahine ke uske kul points, badalne se pehle.

3 Ab asli badlav karo

Wahi hukm, aakhir me --apply laga kar. Aur agar din purana hai (aaj ka nahi), to --rescan-streak bhi — kyun, wo agle page par:

```
node scripts/fix-checkin.js --user faiz --date 2026-09-18 --in 10:09 --apply --rescan-streak
```

Jawab me aakhri hisse me ye dikhega — yahi tumhara sabut hai:

```
Mohd Faiz • 2026-09 ke points: 307 → 313 (farak +6)
  hata : 2026-09-18    -1 auto_late    Late arrival • 2026-09-18
  juda  : 2026-09-21     5 auto_streak Punctual streak • 6 days on time
```

- hata — jo points nikal gaye (yahan late ka jurmana)
- juda — jo naye mile (yahan 6 din lagataar on-time ka inaam)
- farak — kul kitna badla

4 Aakhir me jaanch lo

```
node scripts/verify-streaks.js
```

Ye sirf padhta hai, kuch badalta nahi. Ye batata hai ki streak ke award utne hi hain jitne niyam se banne chahiye.

Dhyan do

Abhi ye "3 zyada" dikhayega — wo Ankit ke teen purane award hain, jinhe tumne jaan-bujh kar rakhne ko kaha tha (26 Sept). Wo galti nahi, tumhara faisla hai.

Har option ka matlab

Option	Kya karta hai
--user faiz	Kiska record. Naam ka hissa, poora email, ya employee ID — koi bhi. Do log match ho gaye to script ruk jaati hai aur dono ke naam dikha deti hai.
--date 2026-09-18	Kis din ka. Hamesha YYYY-MM-DD — pehle saal, phir mahina, phir din.
--in 10:09	Naya check-in. 24 ghante wala waqt — shaam ke 6 baje ke liye 18:00.

Option	Kya karta hai
--out 18:30	Naya check-out (marzi ka). Isse us din ka overtime dobara gina jayega.
--apply	Iske bina kuch nahi badalta. Yahi "haan, kar do" hai.
--rescan-streak	Streak (lagataar on-time dinon ka inaam) dobara ginwata hai. Purana din badla ho to zaroori hai.
--db office_ui_demo	Asli ki jagah test wale database par chalo — pehle aazmane ke liye.

Ek badlav se kya-kya apne aap theek hota hai

Sirf waqt nahi badalta — points ka poora hisaab dobara hota hai, bilkul waise jaise app me "Attendance correction" approve karne par hota hai:

Cheez	Kya hota hai
Status	Late ya Present — naye waqt se dobara tay hota hai (shift aur grace ke hisaab se).
Late ka jurmana	On-time ho gaya to hat jata hai; ab bhi late hai to ghanon ke hisaab se theek hota hai.
Gair-hazri (absent)	Din ab "aaya hua" ban gaya to absent ka jurmana hat jata hai.
Overtime	Check-out badla ho to us mahine ka overtime dobara gina jata hai.
Perfect attendance	Us mahine ka 20-point wala inaam dobara tay hota hai.
Punctual streak	Sirf tab jab --rescan-streak lagao. Neeche dekho kyun.

Streak dobara kyun ginwani padti hai

Niyam: lagataar 6 din on-time aana = +5 points, phir ginti zero se shuru. Itwar, chhutti, approved leave aur work-from-home neutral hain — na ginti todte hain, na ginti me aate hain. Ek late din ya bina batae gair-hazri ginti ko zero kar deti hai.

Dikkat: system har din ko sirf ek baar dekhta hai aur yaad rakhta hai ki kahan tak dekh chuka. Isliye purana din theek karne par wo dobara nahi dekhta — award chhoot jata hai. --rescan-streak usse poori ginti shuru se dobara karwa deta hai.

Isi wajah se +5 aata hai, par alag din par

Faiz wale case me 18 Sept theek karne se award 18 ko nahi, 21 September ko bana — kyunki 15, 16, 17, 18, 19 (20 itwar) ke baad 21 chhatha on-time din tha.

Sirf usi bande ke points hilte hain

Ginti majboori me sab ke liye chalti hai (ek hi scan hai), par --user ke saath chalane par script aakhir me doosron ke award bilkul waise hi wapas kar deti hai jaise the. Matlab: jiska din theek kiya, bas uske points badlenge — kisi aur ka ek point bhi upar-neeche nahi hoga.

Agar kabhi sab ke liye poori ginti dobara karwani ho (jaise bahut saare purane din theek kiye hon), to --user mat do:

```
node scripts/fix-checkin.js --rescan-streak --apply
```

Tab jo award chhoot gaye the wo sab ban jayenge — aur kuch logon ke points badhenge. Ye jaan kar karna.

Ye script kya NAHI karti

- Activity me kuch nahi likhti — ye sudhaar andar ka kaam hai, kisi ki timeline me nahi dikhta.
- Naya record nahi banati — jis din ka koi record hi nahi, us din ke liye ye kaam nahi karegi (pehle app se attendance ya correction banwao).
- Chhutti/leave wale din ka status nahi badalti — waqt badal degi, par din "leave" hi rahega.
- Kisi ko notification nahi bhejti.

Agar koi gadbad dikhe

Jawab me ye dikhe	Matlab / kya karo
"faiz" naam ka koi nahi mila	Naam galat hai. Poora email daal kar dekho.
"..." par 2 log mile	Do logon ke naam milte hain — script ne dono dikha diye honge. Poora email ya employee ID do.
ka koi attendance record hi nahi hai	Us din ka record hi nahi. Pehle app me attendance banwao, phir ye chalao.
--date YYYY-MM-DD me do	Tareekh ka format galat hai. 2026-09-18 jaisa likho.
Kuch aur error	Screenshot le lo aur bata do — bina --apply wale hukm se kuch bigadta nahi.

Sabse zaroori teen baatein

- Pehle hamesha bina --apply chalao. Jo dikhe wo padho, tabhi aage badho.
- Purana din badla ho to --rescan-streak zaroor lagao — warna streak ka inaam chhoot jayega.
- Aakhir me verify-streaks.js chala lo — do second ka kaam hai, aur tasalli ho jaati hai.

Ye guide backend/scripts/make-guide-pdf.py se banti hai. Kuch badalna ho to usi file me matn badal kar python scripts/make-guide-pdf.py chala do.
